## EP3

### NOISE ISOLATING EARPHONES

EP3 Noise Isolating Earphones deliver the high fidelity our company is known for to your iPhone®, iPod®, MP3 player, smart phone or other personal audio player. Our continuous quest for optimal performance led us to the use of ceramic housing. Ceramic due to its relatively neutral acoustic properties, improves audio performance resulting in high fidelity while providing a polished visually stunning appearance. The microphone and smartphone control module adds several convenience functions with just the push of a button. By activating functions with a single button, the earphones become almost hands-free with the microphone close to the mouth and jaw area for clearer conversations.

Redefining the Way You Experience Sound™

## EP3 COMPARISON TO THE EP1 AND EP2

The BIG RBH sound we have incorporated into our tiny earphones is now even better. The EP3 is the successor to our extremely popular EP1 and EP2 earphones. Our goal with the EP3 was to retain the great award winning sound of the EP1 and EP2 earphones while making enhancements where enhancements could be made. The EP3 is a completely new RBH in-ear monitor (IEM) built from the ground up. A new 8mm driver element and tuned ceramic casing is used for the EP3 which improves the frequency response characteristics of the EP1/EP2 models by offering extended bass and high frequency output. The result is a more refined listening experience, with better bass definition and more high frequency detail to the sound. We have also improved reliability and durability of the earphone by using a new fabric/TPE composite cable in conjunction with the aluminum jack and controller using a specially designed strain relief elements which will ensure you will enjoy the great sound of these earphones for years to come.

## PACKAGE CONTENTS
